

LIST OF FIGURES

<i>Figure No.</i>	<i>Title of the Figure</i>	<i>Page No.</i>
4.1	Age of the patient	77
4.2	Caste of the patient	79
4.3	Occupation of the patient	81
4.4	Mother-tongue of the patient	82
4.5	Marital Status	82
4.6	Type of the family	83
4.7	Number of family members	84
4.8	Number of illiterate members in the family	85
4.9	Number of highly educated members in the family	87
4.10	Head of the family	89
4.11	Relationship with neighbours	90
4.12	Mode of recreation	90
4.13	Reading habits of the patients	91
4.14	Family income per month in rupees (approximately)	92
4.15	Number of earning members	93
4.16	Type of house	94
4.17	Kind of house	95
4.18	Ventilation	96
4.19	Water system for drinking purpose	97
4.20	Sanitation	100
4.21	Gardening	101
5.1	Incidence of Amenorrhoea over eleven years	104
5.2	Incidence of Dysmenorrhoea over eleven years	105
5.3	Incidence of Menorrhagia over eleven years	106
5.4	Incidence of Leucorrhoea over eleven years	107
5.5	Incidence of Prolapse over eleven years	108

5.6	Incidence of Cervicitis over eleven years	109
5.7	Incidence of Pelvic Inflammatory Disease (PID) over eleven years	110
5.8	Incidence of Vaginitis over eleven years	111
5.9	Age at menarche	121
5.10	Pain during menstruation	122
5.11	Number of days of menstruation	123
5.12	Device used during menstruation	125
5.13	Disposal	127
5.14	White Discharge	128
5.15	Age at first coitus	129
5.16	Frequency of intercourse	131
5.17	Type of delivery	134
5.18	Number of children	136
5.19	Duration of using family planning method	138
5.20	User of family planning device	139
5.21	Name of the diseases	141
5.22	Reasons for the disease (according to the patient)	144
5.23	Reasons for the disease (according to the family member)	145
5.24	Diagnosis for the first time	148
5.25	Time when the family members came to know about the disease	150
5.26	Any incidence of abortion in patient's life	153
5.27	Duration of conception at the time of abortion	155
5.28	Patient's consent was taken or not before abortion	157
5.29	Whether the patient has taken vaccination or not	159
5.30	System of medicine preferred	162
5.31	Reason for such preference	163
5.32	Reason for not using the preferred system	165
5.33	Number of visit to the hospital	167
5.34	Continuation of the treatment by the patient	169
5.35	Duration of illness	171

5.36	Knowledge of the patient about HIV/AIDS	172
5.37	Source, where from the patient came to know about HIV//AIDS	174
5.38	Source, where from the patient came to know about family planning	176
5.39	Reasons for supporting family planning	178
5.40	Reasons for not supporting family planning	179
5.41	Patients' recognition about the importance of proper nutrition in daily intake of food	181
5.42	Patients' knowledge about water borne diseases	183
5.43	Cause of disease/illness according to the patient	184
5.44	Whether the patient wash hands after toilet or not	186
5.45	Whether the patient wash hands after taking food or not	189
5.46	Daily cleaning of the toilets	191
5.47	Any other thing done to maintain hygiene	193
5.48	Misconceptions/wrong beliefs/malpractices regarding menstruation	194
5.49	Kind of misconceptions	195
5.50	Misconceptions/wrong beliefs/malpractices regarding pregnancy	197
5.51	Kind of misconceptions	198
5.52	Misconceptions/wrong beliefs/malpractices regarding child birth	199
5.53	Kind of misconceptions	200
5.54	Whether the patient discuss the disease openly or not	202
5.55	Patients' preference of female doctors to male ones to discuss about the gynaecological problems	204
